## EDUCATION

**M.S., Computer Science**, University of California, Davis (GPA: **4.0/4.0**)

Expected: June 2025

**B.S., Computer Science & Engineering**, University of California, Davis (GPA: **3.8/4.0**)

June 2023

## WORK EXPERIENCE

**Graduate Student Researcher, DArchR Lab @ University of California, Davis**

Jun 2023 - Present

- Leading a team to develop a graph accelerator in the gem5 simulator for quantum error correcting codes (QECC).
- Leading a team to deliver 10x acceleration in the simulation of full-system cryogenic semiconductors and superconductors.
- Collaborating with a team to develop an autotuning methodology with 90% correlation between gem5 simulation results and hardware profiling metrics.
- Mentoring 5 undergraduate students in the Davis Computer Architecture Lab to prepare them for graduate research.

**Teaching Assistant, University of California, Davis**

Sep 2023 - Dec 2023

- Assisted 180 students in a senior-level Probability & Statistical Modeling class.

**Software Developer Intern & Tech Lead, humanID, Davis**

Jan 2022 - Jun 2022

- Completed 10 projects with global teams, including:
  - Documentation of a Discord bot that combats spam and fake users.
  - Django-based web application for permission management for 100 users.

**Technical Product Marketing Intern, SiTime Corp., Santa Clara**

Jul 2021 - Sep 2021

- Presented strategy to improve distributor margin management and earned profits by \$250,000.
- Conducted a market survey on optical transceivers used in AI networking, to identify customers for MEMS timing chips.
- Created Visio diagrams for the product requirements document (PRD) of a timing chip.

## ACADEMIC PROJECTS

**Automated Frameworks of Semantic Augmentation to Improve MWP Solving**

Apr 2024 - Jun 2024

*Machine Learning Project*

*Python, NLP, Prompt Engineering*

- Improved PaLM 2 LLM prompting accuracy on math word problems (MWPs) by 10% and TinyLlama fine-tuning LM accuracy by 60% through a one-shot digit-level semantics framework.
- Introduced a novel demonstration selection model to improve accuracy of LLMs. Model used BLEU scores and Levenshtein distance to identify the most similar equations for one-shot examples.

**Effects of Toxicity on Disengagement in Open-Source Projects**

Jan 2024 - Mar 2024

*Software Engineering Project*

*Python, GitHub mining, scikit-learn*

- Found a strong correlation ( $R^2 = 0.76$ ) between high developer engagement in FAANG projects with larger codebases and lower levels of toxicity, offering actionable insights for community management.
- Quantified toxic behavior using sentiment analysis and mining corporate and non-profit repositories, revealing that toxicity disproportionately impacts new developers, affecting them up to 1.3x more than experienced ones.

**Behavior of Spectre in Different Branch Predictors in gem5**

Oct 2023 - Dec 2023

*Computer Architecture Project*

*Python, C++, gem5, Docker*

- Demonstrated up to a 55% reduction in susceptibility to speculative execution attacks by validating design enhancements like longer training periods and minimizing biased branches for Spectre-resistant branch predictors.
- Investigated the vulnerability of x86-based in-order and out-of-order processors to Spectre V1 attacks, revealing a strong correlation between branch predictor training periods and attack effectiveness.

**gem5 Vision**

Jan 2023 - Jun 2023

*Framework*

*Next.js, Python, MongoDB, JSON Schema*

- Boosted resource discovery speed by 20x with optimized search functionality across 1,200+ resources.
- Enabled faster retrieval of resources across 20+ categories by introducing categorization and semantic versioning.
- Enhanced accessibility for 500+ industry and academic user by integrating local/remote JSON files and MongoDB with gem5.

## TECHNICAL SKILLS

---

**Languages:** Python, C++, C, Java, JavaScript

**Frameworks:** React, Next.js, TensorFlow, PyTorch, Django, Flask, scikit-learn, pandas, NumPy, Matplotlib

**Tools & Technologies:** Git, Docker, MongoDB, gem5, Unix/Linux, LaTeX
