

# Kunal Pai

408-620-2339 | pai.kunal05@gmail.com | linkedin.com/in/kunpai | github.com/kunpai | kunpai.space

## EDUCATION

Ph.D., Computer Science, University of California, Los Angeles

Expected: June 2032

M.S., Computer Science, University of California, Davis (GPA: 4.0/4.0)

June 2026

## RELEVANT SKILLS

**Languages:** Python, C++, C, JavaScript, Java

**ML/AI:** TensorFlow, PyTorch, scikit-learn, LLMs, Prompt Engineering, Ollama, Hugging Face, Multi-agent Systems

**Web/Data:** React, Next.js, Django, Flask, MongoDB, pandas, NumPy, Matplotlib

**Tools:** Git, Docker, Unix/Linux, gem5, Jupyter, LLVM, Clang

## WORK EXPERIENCE

Graduate Student Researcher, *DavSec Lab @ UC Davis*

April 2025 – Present

- Built an automated pipeline for C-to-Rust transpilation using LLMs, with 5 prompt variations, targeting secure systems migration
- Identified Halstead vocabulary as the strongest metric for predicting translation difficulty
- Validated lightweight semantic augmentations (e.g., filename context) that improved functional accuracy by 5%
- Benchmarked state-of-the-art LLMs across 746 C/C++ programs, achieving 70.2% functional accuracy with best prompt design

Graduate Student Researcher, *DECAL Lab @ UC Davis*

September 2022 – December 2024

- Developed a 4,500-sample dataset for pairwise code-documentation alignment from 200 open-source Python projects, enabling future research in software maintenance
- Engineered a pipeline for measuring calibration and correctness of large language models for code repair, using Defects4J
- Collaborated in validating efficacy of semantic augmentation of language model prompts for code summarization using precision and recall metrics like ROUGE and METEOR

**CoDocBench: A Dataset for Code-Documentation Alignment in Software Maintenance**, Pai, K., Devanbu, P. & Ahmed, T., *International Conference on Mining Software Repositories (MSR) 2025: Data and Tool Showcase Track*

**Calibration and Correctness of Language Models for Code**, Spiess, C., Gros, D., Pai, K.S., et. al., *International Conference on Software Engineering (ICSE) 2025*

**Automatic semantic augmentation of language model prompts (for code summarization)**, Ahmed, T., Pai, K.S., Devanbu, P. & Barr, E.T., *International Conference on Software Engineering (ICSE) 2024*

## PROJECT EXPERIENCE

**NAAMSE: Neural Adversarial Agent Mutation-based Security Evaluator**

Research Project

Nov 2025 – Present

Python, LLMs, Evolutionary Algorithms

- Won 2nd place (Agent Safety) at the UC Berkeley RDI AgentBeats Competition; framework infrastructure was subsequently forked by Mozilla's Odin team.
- Designed and implemented a clustering engine to identify semantic attack vectors in LLM-generated adversarial prompts.
- Engineered an attack pipeline that iteratively generates, evaluates, and refines adversarial prompts against target models.
- Benchmarked multiple frontier LLMs within the framework to validate attack effectiveness and refine scoring metrics.

**SuperNOVA: Superconducting Graph Accelerator in gem5**

Research Project, *DArchR Lab @ UC Davis*

January 2024 – March 2026

C++, Python, gem5, Hardware Simulation

- Modeling a superconducting graph accelerator in gem5, targeting sparse workloads under cryogenic conditions
- Integrating energy and latency estimates from superconducting literature, and RTL simulations, to improve realism
- Mentoring undergraduate researchers on modeling, benchmarking, and research writing; one co-authored a ModSim 2024 poster

## **gem5 Vision**

### *Resource Discovery Framework*

January 2023 – June 2023

*Next.js, Python, MongoDB, JSON Schema*

- Boosted resource discovery speed by 20x with optimized search functionality across 1,200+ resources.
- Enabled faster retrieval of resources across 20+ categories by introducing categorization and semantic versioning.
- Enhanced accessibility for 500+ industry and academic users by integrating local/remote JSON files and MongoDB with gem5.
