## EDUCATION

|                                                                                                                              |                     |
|------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Ph.D., Computer Science</b> , University of California, Los Angeles                                                       | Expected: June 2032 |
| <b>M.S., Computer Science</b> , University of California, Davis (GPA: <b>4.0/4.0</b> )                                       | June 2026           |
| <b>B.S., Computer Science &amp; Engineering</b> , University of California, Davis (GPA: <b>3.8/4.0</b> ), <i>with Honors</i> | June 2023           |

## RELEVANT SKILLS

**Languages:** Python, C++, C, JavaScript, Java, Rust

**ML/AI:** TensorFlow, PyTorch, scikit-learn, LLMs, Prompt Engineering, Ollama, Hugging Face, Multi-agent Systems

**Web/Data:** React, Next.js, Django, Flask, MongoDB, pandas, NumPy, Matplotlib

**Tools:** Git, Docker, Unix/Linux, gem5, Jupyter, LLVM, Clang

## WORK EXPERIENCE

**Graduate Student Researcher, DavSec Lab @ UC Davis** April 2025 – Present  
*Research Project* Python, LLMs, C++, Rust, Compiler Analysis

- Built automated C-to-Rust transpilation pipeline using LLMs with 5 prompt variations, benchmarking state-of-the-art models across 746 programs and achieving 70.2% functional accuracy
- Engineered a multi-variant performance-aware transpilation framework that explores alternative Rust implementations in an evolutionary agent setting, yielding up to 3× runtime reduction across benchmarks
- Developed cross-layer analysis framework combining compiler metrics with hardware performance counters to expose semantic and optimization gaps in LLM-translated, syntax-directed and manually-written Rust translations

**Graduate Student Researcher, DECAL Lab @ UC Davis** September 2022 – December 2024  
*Research Project* Python, LLMs, Machine Learning, Code Analysis

- Developed a 4,500-sample dataset for pairwise code-documentation alignment from 200 open-source Python projects, enabling future research in software maintenance
- Engineered a pipeline for measuring calibration and correctness of large language models for code repair, using Defects4J
- Collaborated in validating efficacy of semantic augmentation of language model prompts for code summarization using precision and recall metrics like ROUGE and METEOR

**Teaching Assistant, University of California, Davis** September 2023 – December 2023

- Assisted 180 students in a senior-level Probability & Statistical Modeling class.
